

**Amendments to the Claims:**

The following listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Original) A method of testing for hepatic diseases comprising collecting breath, quantifying isopropanol and/or cyanides in the breath, and analyzing a result thereof.
2. (Original) A method of testing according to claim 1 for testing for hepatic cirrhosis.
3. (Currently Amended) A breath analyzing apparatus for testing for hepatic diseases comprising a breath collecting section for introducing breath to be analyzed, a breath analyzing section wherein isopropanol and/or cyanides in the breath are quantified, and a data-processing section which analyzes the ~~measurement~~quantified result obtained by the breath analyzing section.
4. (Original) The breath analyzing apparatus according to claim 3 wherein the breath collecting section consists of a breath collecting means and a breath transfer means.
5. (Original) The breath analyzing apparatus according to claim 4 wherein the breath collecting means is a mouthpiece or a mask.
6. (Original) The breath analyzing apparatus according to claim 4 wherein the breath collecting means is a communicating opening for connecting a breath container.
7. (Currently Amended) The breath analyzing apparatus according to claim 4 wherein the breath transfer means comprises a duct which connects the breath collecting means and the breath analyzing section so that the breath can flow from the breath collecting means through themthe duct to the breath analyzing section.
8. (Currently Amended) The breath analyzing apparatus according to claim 7 wherein the breath transfer means ~~includes~~furtherincludes a pump means to send breath to the breath analyzing section.

9. (Currently Amended) The breath analyzing apparatus according to claim 7 wherein the breath collecting means includes ~~both the~~ the mouthpiece or ~~the~~ mask and ~~the~~ mask, a communicating opening for connecting ~~the~~ the breath container, and a valve means which can be switched so that only one of ~~them~~ which is chosen depending a case can be communicate (a) the mouthpiece or the mask and (b) the breath container communicates with the breath analyzing section is provided at the duct.

10. (Original) The breath analyzing apparatus according to claim 3 wherein the breath analyzing section comprises a mass spectrometer.

11. (Currently Amended) The breath analyzing apparatus according to claim 4 wherein the breath analyzing section iscomprises a mass spectrometer.

12. (Original) The breath analyzing apparatus according to claim 7 wherein the breath analyzing section comprises a mass spectrometer.

13. (Original) The breath analyzing apparatus according to claim 9 wherein the breath analyzing section comprises a mass spectrometer.

14.-20. (Canceled)

21. (New) A breath analyzing apparatus for testing for hepatic cirrhosis comprising a breath collecting section for introducing breath to be analyzed, a breath analyzing section wherein isopropanol and/or cyanides in the breath are quantified, and a data-processing section which analyzes the quantified result obtained by the breath analyzing section.

22. (New) The breath analyzing apparatus according to claim 21 wherein the breath collecting section consists of a breath collecting means and a breath transfer means.

23. (New) The breath analyzing apparatus according to claim 22 wherein the breath collecting means is a mouthpiece or a mask.

24. (New) The breath analyzing apparatus according to claim 22 wherein the breath collecting means is a communicating opening for connecting a breath container.

25. (New) The breath analyzing apparatus according to claim 22 wherein the breath transfer means comprises a duct which connects the breath collecting means and the breath analyzing section so that the breath can flow from the breath collecting means through the duct to the breath analyzing section.

26. (New) The breath analyzing apparatus according to claim 25 wherein the breath transfer means further includes a pump means to send breath to the breath analyzing section.

27. (New) The breath analyzing apparatus according to claim 25 wherein the breath collecting means includes a mouthpiece or a mask, a communicating opening for connecting a breath container, and a valve means which can be switched so that only one of (a) the mouthpiece or the mask and (b) the breath container communicates with the breath analyzing section is provided at the duct.

28. (New) The breath analyzing apparatus according to claim 21 wherein the breath analyzing section comprises a mass spectrometer.

29. (New) The breath analyzing apparatus according to claim 22 wherein the breath analyzing section comprises a mass spectrometer.

30. (New) The breath analyzing apparatus according to claim 25 wherein the breath analyzing section comprises a mass spectrometer.

31. (New) The breath analyzing apparatus according to claim 22 wherein the breath analyzing section comprises a mass spectrometer.

32. (New) The breath analyzing apparatus according to claim 3 wherein at least isopropanol in the breath is quantified.

33. (New) The breath analyzing apparatus according to claim 3 wherein at least cyanides in the breath are quantified.

34. (New) The breath analyzing apparatus according to claim 3 wherein both isopropanol and cyanides in the breath are quantified.
